Building AI and ML powered applications without machine learning expertise

Govind Palanisamy

Solutions Architect AWS govpal@amazon.com

© 2024, Amazon Web Services, Inc. or its affiliates. All rights reserved.

At AWS, our goal is to put machine learning in the hands of business teams

Enhance customer experience

Augment human ingenuity

Improve business operations

New products and services Al-powered contact center

Chatbots and virtual assistants

Personalization

Identity verification

Content moderation

Employee assistants

Content generation

Forecasting

Code generation

Report generation

Document processing

Fraud preventions

Predictive maintenance

Machine translation

Visual inspection

Process optimization

Enhance customer experience

Boost Employee Productivity

Improve business operations

New products and services

New use cases

Low-code/ No-code AWS AI/ML services

EASILY ADD INTELLIGENCE TO YOUR BUSINES APPLICATIONS

Example use cases

Conversational AI

Intelligent Search

Identity Verification

Intelligent Document Processing (IDP)

AWS AI/ML solutions library

aws.amazon.com/solutions/ai-ml/

Conversational AI

• Voice and text-based interfaces to enhance end user experience and increase customer satisfaction

Use case categories

- Self-service bots
- Virtual agents and assistants
- Transactional bots
- Proactive help based on usage behavior

Benefits

- Enable new ways of engagement
- Increase customer satisfaction
- Reduce operational costs
- Streamline business processes

Intelligent search

• Get the most out of your data with Intelligent Search

Use case categories

- Improve customer interactions
- Accelerate research and development
- Minimize regulatory & compliance risks
- Equip employees with the data they need

Benefits

- Find answers faster across unstructured content
- Boost workforce productivity
- Enhance customer experiences
- Centralize access to knowledge

Underlying AI services

Identity verification

• Enable secure and compliant digital experiences

Use case category

- Citizen Identity Verification
- Healthcare and Social Services
- Education and Student Services
- Customer onboarding & verification
- Online proctoring

Benefits

- Reduce onboarding friction
- Reduce fraud
- Lower costs and overheads

Underlying AI services

Guidance

Guidance for Identity Verification

Intelligent document processing

• Make faster decisions by automatically extracting and analyzing data from documents

Use case categories

- Insurance forms text extraction
- Mortgage applications data extraction
- Medical forms processing
- Financial

Benefits

- Higher accuracy of data
- Faster data processing
- Improve employee productivity
- Cost savings

Amazon SageMaker Canvas

Building practical ML applications is hard

The bottleneck BUILDING BETTER ML APPLICATIONS CAN BE THE BOTTLENECK BECAUSE:

- Line of business teams depend on data science teams to make ML powered decisions
- Data science teams are oversubscribed, while ML needs are only increasing
- High learning curve for technical users to learn how to code
- Friction points in the machine learning journey and prioritizing use cases

Ready-to-use ML models powered by AWS AI services

- Foundation Models
- Intelligent document processing
- Natural Language processing
- Computer Vision

Prepare data

- 50+ data connectors
- Rich data insights powered by ML
- Built-in visualizations
- 300+ build-in transforms

Amazon Q

© 2024, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Amazon Q, a generative AI powered assistant from AWS

Amazon Q Business

The generative AI assistant that empowers employees with your organization's knowledge and data

Amazon Q Business overview

BOOST YOUR WORKFORCE PRODUCTIVITY WITH GENERATIVE AI

Delivers quick, accurate, and relevant answers to your business questions, securely, and privately

Execute actions using out-of-thebox or custom plugins

Respects existing access control based on user permissions

Connects to over 40 popular enterprise applications and document repositories

Enables administrators to easily apply guardrails to customize and control responses

Streamlines daily tasks with usercreated lightweight applications

Amazon Q Apps

EASILY BUILD AND SHARE CUSTOMIZED, SECURE, LIGHTWEIGHT APPLICATIONS

Easily convert an Amazon Q conversation into a lightweight application or describe what you want to build using natural language

Employees can share their applications with other employees or publish them to the organization's catalog for others to use as is, or modify them to their particular needs

Leverages your enterprise data through Amazon Q 40+ connectors

Inherits Amazon Q security and governance controls, including user authentication and access controls

Amazon Q: Secure and private by design

YOUR DATA IS YOUR DIFFERENTIATOR

Respects existing governance identities, roles, and permissions, personalizing interactions accordingly

When you sign up for Amazon Q Developer Pro or Amazon Q Business, we don't use content to improve underlying models for others

Amazon Q Developer

Reimagine the experience across the entire software development lifecycle

Amazon Q Developer

Reimagines the experience across the entire software delivery lifecycle

Helps developers and IT professionals build and manage secure, scalable, and highly available applications

Helps you write, debug, test, optimize, and upgrade your code faster

Converses with you to explore new AWS capabilities, learn unfamiliar technologies, and architect solutions

Amazon Q is built with security and privacy in mind from the start, making it simpler for organizations to use generative AI safely.

Amazon Q is available where you do your work

Explore and plan

Ask questions and get guidance from 17 years of AWS knowledge, best practices, and wellarchitected advice

Create a businessexpert application using your data, systems, and more.

Write and implement entire application features in minutes right from a simple natural language prompt in your IDE

Interactive step-by-step instructions, code, tests, and best practices

Amazon Q supports developers across the SDLC

Plan

- Amazon Q in Console (best practices, AWS Web Application Firewall (WAF), Amazon Elastic Compute Cloud (EC2) instance optimization, etc.)
- Business-specific application

Create

- In-line coding companion in integrated development environment (IDE) and Command Line Interface (CLI)
- Feature development
- Chat in IDE

Test and secure

- Unit test generation
- Security scanning and remediation

Operate

- Troubleshoot errors (Simple Storage Service (S3), Lambda, EC2, Elastic Kubernetes Service (EKS))
- Virtual Private Cloud (VPC) Reachability Analyzer

Maintain and modernize

Modernize code with Q Code Transformation

Amazon Q in QuickSight

A new generative AI assistant for BI

© 2024, Amazon Web Services, Inc. or its affiliates. All rights reserved.

Foster a data-driven culture with Q

SELF-SERVICE INSIGHTS FOR ANYONE USING ML-POWERED NLQ

- Ask questions in natural language
- ML-models interpret user question and intent to generate visualization
- AI-enhanced automated data preparation accelerates time-to-value

Forecast

- See what's likely to happen
- See future trajectories for up to 3 measures simultaneously

Ask 'Why'?

- Identify key drivers to changes in the data with contribution analysis
- Quantify contribution by each driver

AWS App Studio

Accelerate app development with a generative AI-powered assistant

AWS App Studio

The Fastest and Easiest Way to Build Business Applications

Deploy highly scalable applications without operational overhead

Preview

Enhance security and governance that delights IT

Save up to 80% vs. comparable offerings

Accelerate application creation with a generative AI-powered assistant

Describe the application you need, the generative AIpowered assistant will generate the full application, including UI, data models, and business logic.

Low-code environment with drag-and-drop canvas and AI helpers to customize UI, functionality, and roles, without professional software development skills.

Connect to your data seamlessly

Connectors (4)					
Q Search connectors			+	Create connt tor	
Name 11	Description	↓↑	Connected to $\downarrow\uparrow$	Created by \downarrow	
Invoice Processing	Sample DB for Invoice processing		⊖ Amazon DynamoDB	d801f3d0- 40a1-70f2-e898- 5caaca4599f7	
Send Email (Amazon Simple Email Service) Test connector for sending email through	SES	Simple Email Service	D d801f3d0- 40a1-70f2-e898- 5caaca4599f7	
Document Intelligence (Amazon S3)	Test connector for viewing and uploading	files	₿ S3	D d801f3d0- 40a1-70f2-e898- 5caaca4599f7	
Inspections Management (Amazon Aurora)	Demo DB with field service test data		Amazon Aurora	D d801f3d0- 40a1-70f2-e898- 5caaca4599f7	

A large selection of pre-built connectors for seamless integration with your enterprise data sources.

Easily connect to AWS services like DynamoDB, RDS, Redshift, S3, and 200+ others.

API and OpenAPI connectors to integrate with hundreds of third-party services, including Salesforce.

Per-user authentication for integrating with third-party SaaS applications.

Extend with custom functionality

AWS Solution overview

The diagram below presents the architecture you can automatically deploy using the solution's implementation guide and accompanying AWS CloudFormation template.

Document Understanding Solution architecture

The AWS CloudFormation template deploys a static web application hosted in an Amazon S3 bucket and served by an Amazon CloudFront distribution. Users are authenticated using Amazon Cognito. The web application interacts with the backend using an Amazon API Gateway API, supported by an AWS Lambda function. Documents are uploaded using either the web application, or directly to a dedicated Amazon S3 bucket for bulk processing. Document processing is initiated by the API, which initiates a Lambda function to add an entry to an Amazon DynamoDB table. The table initiates a second Lambda function that supervises the processing.
